SUMMARY

Senior backend engineer with 14+ years of experience designing data-intensive systems on AWS. At Musixmatch, I built the company-wide real-time data platform (millions of records/day), led migrations to Kubernetes-based microservices that cut infrastructure costs by up to 90%, and contributed to an 80% reduction in high-severity vulnerabilities as part of the security squad. I work best on problems where scale, reliability, and cost efficiency intersect — turning legacy systems into scalable, observable, production-grade services.

SKILLS

Cloud & Infrastructure: AWS (Kinesis, Firehose, Lambda, S3, EC2, Beanstalk, RDS, Redshift, Athena), Kubernetes, Docker, Terraform, CI/CD, Azure Pipelines

Backend: C#, ASP.NET, PHP, Python, Node.js, Nest.js, Laminas Mezzio, REST APIs, microservices architecture, MVC

Data: SQL (MSSQL, MySQL, Aurora), NoSQL (DynamoDB), Memcached, data pipelines, real-time streaming

Frontend: JavaScript, TypeScript, HTML/CSS, Bootstrap, jQuery

Tools & Practices: Git, Claude Code, security best practices, code review, system design

Languages: Italian (native), English (C2 — EF SET 73/100)

WORK EXPERIENCE

Senior Software Engineer L5

Jun 2022 - present

Musixmatch spa

- Led development of a company-wide real-time data platform serving as the single source of truth. Built on AWS (Kinesis, Firehose, Lambda) with REST APIs and CSV export capabilities, the system processed several million records daily with automated normalization. Achieved near real-time updates, improved cross-team data access, and reduced infrastructure and maintenance costs by 50%.
- On the backend, focused on developing efficient, scalable solutions for the architecture and software, particularly managing the royalties process, which involves billions of data rows.
- Successfully migrated several legacy systems to Kubernetes and a microservices architecture, resulting in a 90% average reduction in costs.
- Designed a usage tracking system with a 99.99% uptime, capable of handling millions of data records without any migration downtime (based on REST PHP APIs, Firehose, S3).
- As a part of security squad, contributed to an 80% reduction in critical and high-severity vulnerabilities through targeted remediation and promotion of security best practices.

Senior Full-Stack Engineer

Jul 2011 - Jun 2022

Database Informatica Srl

Joined as junior developer after high school and promoted to Senior in 4 years. Acted as technical reference point in a 10-person company, leading architectural decisions and modernizing the engineering stack across the team.

- Introduced modern engineering practices to the team, including the MVC pattern, Bootstrap, a shift from monolithic applications to REST API-driven architectures, and the migration from Visual SourceSafe to Git — raising code quality, maintainability, and collaboration standards across projects.
- Designed and built a C# e-invoicing automation service for a national client with multi-million euro revenue, processing thousands of invoices monthly with 99.9% accuracy. Full lifecycle automation including PDF generation, base64 embedding, and p7m digital signing.
- Led development of a map-based search platform aggregating 100,000+ business listings, integrated with Google Maps API and a custom back-office system (C#, HTML5, jQuery, MSSQL).
- Delivered digital payment systems for municipalities and trade associations in the Modena district, handling citizen-facing transactions for public services.
- Built and maintained institutional websites and a full invoicing management system for SMEs, serving as the primary technical owner end-to-end — from requirements gathering to deployment and support.
- Designed REST APIs to expose internal system data to external partners and applications, reducing manual operations by 80%.
- Implemented a barcode-based activity tracking system (generation and reading) with MSSQL persistence, increasing operational efficiency by 70%.

Stack: C#, ASP.NET, MSSQL, PHP, MySQL, JavaScript, jQuery, HTML5, Bootstrap

EDUCATION

Harvard School of Engineering and Applied Sciences

Nov 2020 - Feb 2021

Introduction to Computer Science & Artificial Intelligence and Machine Learning with Python

- Online mooc provided by Harvard University & EDx
- Completed Courses: CS50AI, CS50X

Modena and Reggio Emilia University

Sep 2009 - Jun 2011

Bachelor of Science in Computer Science

- Enrolled from Sept. 2009 to 2011 (**drop out**)
- Completed courses: Algorithms I & II, Mathematical analysis I, English, Statistics I

I.T.I.S Primo Levi

Sep 2004 - Jun 2009

High School - IT Engineer

- Diploma 100/100 summa cum laude
-

ADDITIONAL INFORMATION

- **Certifications:**
 - **Tech:** Data Analytics Professional Certificate (Google), Machine Learning for Business Professional (Google), Data Science Math Skills (Duke University), CS50AI Introduction to Artificial Intelligence & Machine Learning with Python (Harvard University), CS50X Introduction to Computer Science (Harvard University)
 - **Arts:** Essentials of Global Health (Yale University), Psychological First Aid (Johns Hopkins University), Introduction to Philosophy (The University of Edinburgh), Social Psychology (Wesleyan University)
 - **Awards/Activities:** Winner of Vignola Math&Logic Games 2009, Winner of Poetry Festival 2008, Mention in the INDIRE - Italian National Register of Excellence, Personal publication - Continuous Time Dynamical System and Numeric Integration Methods (italian), Mention on ModenaToday newspaper
-

PERSONAL PROJECTS

Personal website - gianandresechi.com

Mar 2021 - present

Website: [view](#) - Info project: [more info](#)

Full-stack developer portfolio built entirely from scratch using PHP, MySQL, Bootstrap, and jQuery/Ajax. Designed as a custom digital showcase for my projects and professional experience, bypassing CMS platforms like WordPress to ensure maximum customization, performance optimization, and complete creative control.

Near-me

May 2020 - May 2021

I've founded NearMe (info [here](#)).

Developed NearMe, a non-profit website providing visibility to small local businesses in the Modena district during the COVID-19 pandemic. The platform served as a centralized resource for consumers to discover operational businesses and their adapted services (delivery, takeaway, video consultations).
Built using Bootstrap, HTML5, jQuery, MySQL and PHP.

Near-me Data

May 2020 - present

Live app: [view](#) - Info project: [more info](#)

Developed 'NearMe Data,' a dedicated section within my personal NearMe project that presents COVID-19 pandemic statistics and vaccination data from official Italian Government sources in an accessible format. Created in response to the information challenges during the second wave of the pandemic, the application was built using Bootstrap, HTML5, jQuery, and PHP to efficiently process and display data from the Italian Civil Protection GitHub repository.
